EDUCATION

AllenHouse Institute of Technology, Kanpur, UP

2023 – 2027

Bachelor's in Computer Science | CGPA: 7.0

UP Kirana Seva Samiti Vidyalaya, Kanpur, UP

2022

Intermediate

TRAINING & CERTIFICATIONS

- Certified in Java — SCALER.COM (2025): covered OOP, multithreading, collections, and data structures
- Certified in Python — Udemy: covered core Python, file I/O, APIs, and data manipulation with pandas & NumPy
- Completed intensive training in Data Structures & Algorithms (Arrays, Trees, Graphs, DP) — AllenHouse Institute of Technology (2025)

PROJECTS

AI Health & Fitness Planner | Python, Streamlit, Gemini AI, REST API

June 2026

- Architected and deployed a full-stack AI health application using Python and Streamlit, serving personalized health analytics through a responsive web interface.
- Engineered core health computation modules for BMI, BMR, and TDEE calculations using modular, reusable Python functions with input validation and edge-case handling.
- Integrated Google Gemini AI REST API with structured prompt engineering to generate dynamic, user-specific diet and workout plans, handling asynchronous API responses.
- Applied software design principles (modularity, separation of concerns) to build maintainable components for data input, computation, AI inference, and UI rendering.
- Managed full project lifecycle using Git branching strategies and GitHub for version control, issue tracking, and deployment.
- Tech Stack: Python, Streamlit, Gemini API, Git, GitHub | github.com/umar80643/ai-health-fitness-planner

Plagiarism & AI Content Detector | Python, Streamlit, Scikit-learn, TF-IDF, Logistic Regression

June 2026

- Designed and implemented an end-to-end ML system for AI-generated content detection and plagiarism analysis across TXT, PDF, and DOCX documents with modular architecture.
- Built a scalable text-processing pipeline using TF-IDF vectorization ($O(n \cdot m)$ complexity), data preprocessing, and feature extraction to handle variable-length documents efficiently.
- Implemented cosine similarity-based plagiarism detection and trained a Logistic Regression classifier, achieving reliable prediction confidence across multiple document types.
- Developed an interactive Streamlit dashboard with multi-file upload, real-time confidence scoring, prediction visualization, and auto-generated downloadable analysis reports.
- Optimized system performance by serializing trained models with Joblib, reducing inference latency and eliminating retraining overhead for production deployment.
- Designed reusable, decoupled modules for file I/O, preprocessing, model inference, and report generation — enabling easy extension and maintenance.
- Tech Stack: Python, Streamlit, Scikit-learn, Logistic Regression, Git, GitHub | github.com/umar80643/plagiarism-ai-detector

Calculator Application | Java, Swing, OOP

Oct 2024

- Engineered a GUI-based calculator using Java Swing, applying OOP design patterns (encapsulation, abstraction) and event-driven architecture for responsive user interaction.
- Implemented robust exception handling, input validation, and modular component design to ensure reliability, extensibility, and clean separation of business logic from UI.
- Tech Stack: Java, Swing

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS

Frameworks: React, Node.js, Streamlit

Dev Tools: Git, GitHub, VS Code, Visual Studio, PyCharm, IntelliJ

Libraries: pandas, NumPy, Matplotlib, Scikit-learn, Joblib

AI / APIs: Google Gemini AI API, REST APIs

CS Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Design, Modular Architecture
